Summary

Backend Developer with 1+ year of experience building scalable microservices and distributed systems primarily using Go (Golang). Skilled in backend architecture, asynchronous processing, database optimization, and polyglot persistence. Experienced in designing secure, high performance enterprise applications with modern DevOps practices and AI assisted development workflows.

Skills

Technical Skills: Go (Golang), Java, Spring Boot, PostgreSQL, MySQL, Redis, ClickHouse, Kafka, Docker, GCP, AWS S3, Git/GitHub, WebSockets, JWT/RBAC, Hibernate/JPA.

Backend Engineering: Microservices, Distributed Systems, REST APIs, Concurrency, Goroutines, Channels, Async Batch Processing, Worker Pools, Domain Driven Design, Polyglot Persistence, DB Query Optimization, System Design, Encryption.

Experience

NextZen Minds | Kolkata, West Bengal

Software Developer | Mar 2025 – Present

- Progressed through roles from Intern to Software Developer, focusing on the end to end engineering and ownership of distributed backend microservices and enterprise grade applications.
- Unieli-Care (Telehealth Platform)** | Go, PostgreSQL, Redis, GCP | [\[Link\]](#)
 - Developed a HIPAA compliant telehealth platform using interface driven Go microservices, implementing automated clinical alerts and application layer encryption using AES-CBC.
 - Engineered a scalable multi threaded worker pool to process bulk medical records in the background, dropping API response times to milliseconds by offloading blocking database operations.
 - Architected a dynamic document generation engine that binds transactional data to HTML templates to generate thousands of compliant PDF medical superbills on the fly.
 - Integrated third party APIs (Stripe) to provision secure, tokenized virtual consultation sessions and managed communication via Twilio (SMS) and SendGrid (Email).
- Vanguard (B2B Credit Management)** | Java, Spring Boot, MySQL, Redis, ClickHouse, Kafka
 - Managed a microservices based credit ledger system managing real time transactional balances and complex hierarchical agent permissions.
 - Implemented a polyglot persistence strategy, utilizing MySQL for ACID compliant transactional data and ClickHouse for high performance aggregation of 500,000+ daily historical records.
 - Developed an asynchronous batch processing engine and global exception handler to significantly reduce database load and ensure predictable, standardized RESTful API responses.
 - Engineered an event driven data pipeline using Apache Kafka, building custom consumers to ingest real time transaction streams from external betting services to feed the internal credit ledger.

Projects

Pady (Real-Time Collaborative Editor) | Go, React, PostgreSQL, WebSockets, Docker | [\[Link\]](#)

- Engineered a high performance, real time collaborative document editor utilizing WebSockets for seamless multi user synchronization and low latency editing.
- Architected a robust backend in Go, implementing a secure RESTful API with JWT based authentication and a service-repository pattern for scalable management.
- Designed and integrated a PostgreSQL database schema with automated migrations and optimized queries for handling complex document metadata and user states.
- Utilized AI tools to rapidly architect a responsive React/TypeScript frontend, effectively extending technical reach to deliver a sophisticated document management dashboard and editor.
- Containerized the full application stack using Docker and Docker Compose to ensure environment parity and streamlined deployment across development and production.

Education

Narula Institute of Technology | Kolkata, West Bengal

B.Tech, Information Technology | 2021 - 2025

Average GPA: 8.30

Coursework: Operating System, Database Management System, Computer Networks, Object Oriented Programming, Data Structures and Algorithms.
